

# How to clean up your infected PC (for free)

(and keep it clean)

- 1) Download and run Kaspersky's TDSSKiller at <http://support.kaspersky.com/us/viruses/disinfection/5350#block1> (free)
- 2) Download and run McAfee's RootkitRemover at <http://www.mcafee.com/us/downloads/free-tools/rootkitremover.aspx> (free)
- 3) Download and run ESET's Rogue Application Remover at <http://kb.eset.com/esetkb/index?page=content&id=SOLN3035> (free)
- 4) Download and run AdwCleaner at <https://toolslib.net/downloads/viewdownload/1-adwcleaner/> (free)
- 5) If your current Antivirus program is asking for money for new definitions, uninstall it and download, install, update and run Panda Free Antivirus <http://www.cloudantivirus.com/en/> (free)
- 6) Visit Microsoft Update now <http://update.microsoft.com/windowsupdate> and get all critical updates.
- 7) If you have Limewire, Kazaa, Bearshare, Morpheus, iMesh or the like uninstall them because if you don't you'll probably re-infect yourself.
- 8) From time to time, rerun the first four tools and scan your PC again. Panda Free Antivirus will scan automatically.
- 9) Update the Java used by your web browser to the latest version (read install carefully and uncheck any boxes asking to install an extra toolbar or program) <http://www.java.com/en/download/>
- 10) Update the Adobe Reader to the latest version <https://get.adobe.com/reader/?promoid=BUIGO>
- 11) Update the Adobe Flash Player used by your web browser to the latest version <https://get.adobe.com/flashplayer/?promoid=BUIGP>

If after these steps you still have a problem scan with these Online Antivirus scans:

<http://housecall.trendmicro.com/>

<http://www.bitdefender.com/scanner/online/free.html>

<http://www.eset.com/onlinescan/>

[https://www.f-secure.com/en\\_US/web/home\\_us/online-scanner](https://www.f-secure.com/en_US/web/home_us/online-scanner)

<http://www.kaspersky.com/free-virus-scan>

Watch what you click on, they are all FREE but may have paid links next to the FREE option.

Read all installs carefully and uncheck any boxes asking to install an extra toolbar or program.

Finally, Install an alternative web browser like [Google Chrome](#) or [Mozilla Firefox](#) and use it for most of your web surfing.
